#### 1. Introduction

#### 1.1 What is RS485-BL RS485 to LoRaWAN Converter

The Dragino RS485-BL is a RS485 / UART to LoRaWAN Converter for Internet of Things solutions. User can connect RS485 or UART sensor to RS485-BL converter, and configure RS485-BL to periodically read sensor data and upload via LoRaWAN network to IoT server.

RS485-BL can interface to RS485 sensor, 3.3v/5v UART sensor or interrupt sensor. RS485-BL provides **a 3.3v output** and **a 5v output** to power external sensors. Both output voltages are controllable to minimize the total system power consumption.

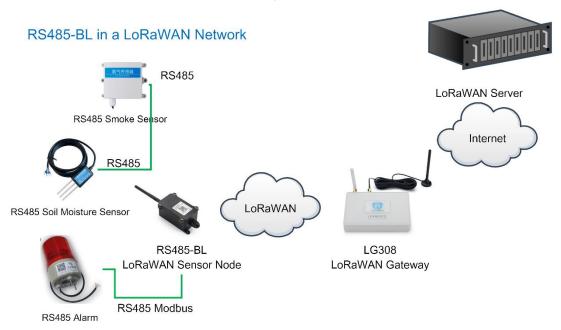

RS485-BL is IP67 waterproof and powered by 8500mAh Li-SOCI2 battery, it is designed for long term use for several years.

RS485-BL runs standard LoRaWAN 1.0.3 in Class A. It can reach long transfer range and easy to integrate with LoRaWAN compatible gateway and IoT server.

For data uplink, RS485-BL sends user-defined commands to RS485 devices and gets the return from the RS485 devices. RS485-BL will process these returns data according to user-define rules to get the final payload and upload to LoRaWAN server.

For data downlink, RS485-BL runs in LoRaWAN Class A. When there is downlink commands from LoRaWAN server, RS485-BL will forward the commands from LoRaWAN server to RS485 devices.

Each RS485-BL pre-load with a set of unique keys for LoRaWAN registration, register these keys to LoRaWAN server and it will auto connect after power on.

RS485-BL waterproof, battery power, RS485 LoRaWAN Converter User Manual

# 1.2 Specifications

### **Hardware System:**

- STM32L072CZT6 MCU
- SX1276/78 Wireless Chip
- Power Consumption (exclude RS485 device):

  - ♦ 20dB Transmit: 130mA@3.3v

### **Interface for Model:**

- ➤ 1 x RS485 Interface
- ➤ 1 x TTL Serial , 3.3v or 5v.
- ➤ 1 x I2C Interface, 3.3v or 5v.
- > 1 x one wire interface
- > 1 x Interrupt Interface

#### LoRa Spec:

- > Frequency Range:
  - ✓ Band 1 (HF): 862 ~ 1020 Mhz
  - ✓ Band 2 (LF): 410 ~ 528 Mhz
- > 168 dB maximum link budget.
- > +20 dBm 100 mW constant RF output vs.
- Programmable bit rate up to 300 kbps.
- High sensitivity: down to -148 dBm.
- ➤ Bullet-proof front end: IIP3 = -12.5 dBm.
- Excellent blocking immunity.
- Fully integrated synthesizer with a resolution of 61 Hz.
- LoRa modulation.
- > Built-in bit synchronizer for clock recovery.
- > Preamble detection.
- > 127 dB Dynamic Range RSSI.
- > Automatic RF Sense and CAD with ultra-fast AFC.

## 1.3 Features

- ✓ LoRaWAN Class A & Class C protocol (default Class A)
- Frequency Bands: CN470/EU433/KR920/US915/EU868/AS923/AU915/IN865/RU864
- ✓ AT Commands to change parameters
- ✓ Remote configure parameters via LoRaWAN Downlink
- ✓ Firmware upgradable via program port
- ✓ Support multiply RS485 devices by flexible rules
- ✓ Support Modbus protocol

✓ Support Interrupt uplink

# 1.4 Applications

- ✓ Smart Buildings & Home Automation
- ✓ Logistics and Supply Chain Management
- ✓ Smart Metering
- ✓ Smart Agriculture
- ✓ Smart Cities
- ✓ Smart Factory

v1.3

Release version

# 2. Pin mapping and Power ON Device

The RS485-BL is powered on by 8500mAh battery. To save battery life, RS485-BL is shipped with power off. User can put the jumper to power on RS485-BL.

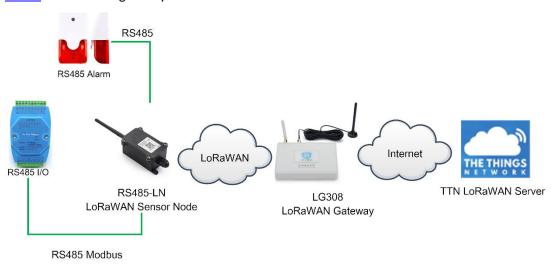

# 3. Operation Mode

#### 3.1 How it works?

The RS485-BL is configured as LoRaWAN OTAA Class A mode by default. It has OTAA keys to join network. To connect a local LoRaWAN network, user just need to input the OTAA keys in the network server and power on the RS485-BL. It will auto join the network via OTAA.

### 3.2 Example to join LoRaWAN network

Here shows an example for how to join the TTN Network. Below is the network structure, we use <u>LG308</u> as LoRaWAN gateway here.

The RS485-BL in this example connected to two RS485 devices for demonstration, user can connect to other RS485 devices via the same method.

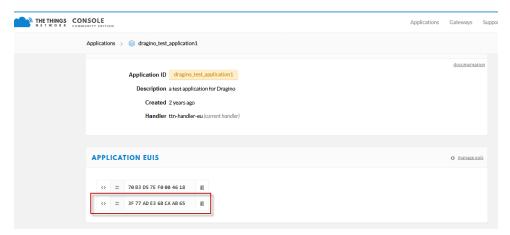

The LG308 is already set to connect to <a href="https://example.com/true-new-red">TTN network</a>. So what we need to now is only configure the TTN:

**Step 1**: Create a device in TTN with the OTAA keys from RS485-BL. Each RS485-BL is shipped with a sticker with unique device EUI:

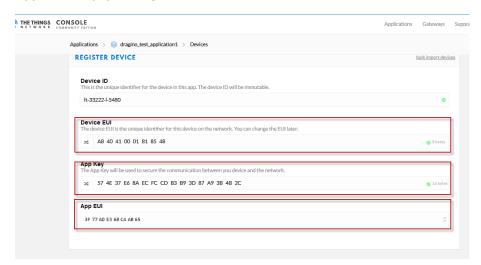

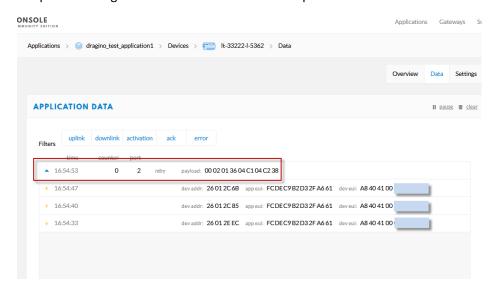

User can enter this key in their LoRaWAN Server portal. Below is TTN screen shot: Add APP EUI in the application.

### Add APP KEY and DEV EUI

**Step 2**: Power on RS485-BL and it will auto join to the TTN network. After join success, it will start to upload message to TTN and user can see in the panel.

RS485-BL waterproof, battery power , RS485 LoRaWAN Converter User Manual

## 3.3 Configure Commands to read data

There are plenty of RS485 devices in the market and each device has different command to read the valid data. To support these devices in flexible, RS485-BL supports flexible command set. User can use <u>AT Commands or LoRaWAN Downlink Command to configure what commands RS485-BL should send for each sampling and how to handle the return from RS485 devices.</u>

## 3.3.1 Configure UART settings for RS485 communication

To use RS485-BL to read data from RS485 sensors, connect the RS485-BL A/B traces to the sensors. And user need to make sure RS485-BL use the match UART setting to access the sensors. The related commands for UART settings are:

AT Commands	Description	Example
AT+BAUDR	Set the baud rate (for RS485	AT+BAUDR=9600
	connection). Default Value is: 9600.	Options:
		(1200,2400,4800,14400,19200,115200)
AT+PARITY	Set UART parity (for RS485 connection)	AT+PARITY=0
	Default Value is: no parity.	Option: 0: no parity, 1: odd parity, 2: even
		parity
AT+STOPBIT	Set serial stopbit (for RS485	AT+STOPBIT=0 for 1bit
	connection)	AT+STOPBIT=1 for 1.5 bit
	Default Value is: 1bit.	AT+STOPBIT=2 for 2 bits

### 3.3.2 Configure RS485 sensors

Some sensors might need to configure before normal operation. User can configure such sensor via PC and RS485 adapter or through RS485-BL AT Commands AT+CFGDEV. Each AT+CFGDEV equals to send a RS485 command to sensors. This command will only run when user input it and won't run during each sampling.

AT Commands	Description	Example
AT+CFGDEV	This command is used to configure the RS485	AT+CFGDEV=xx xx xx xx xx xx xx xx xx xx
	devices; they won't be used during sampling.	xx xx xx,m
	AT+CFGDEV=xx xx	
	xx,m	
	m: 0: no CRC, 1: add CRC-16/MODBUS in the	
	end of this command	

## 3.3.3 Configure read commands for each sampling

During each sampling, we need to confirm what commands we need to send to the RS485 sensors to read data. After the RS485 sensors send back the value, it normally include some bytes and we only need a few from them for a shorten payload.

To save the LoRaWAN network bandwidth, we might need to read data from different sensors and combine their valid value into a short payload.

This section describes how to achieve above goals.

During each sampling, the RS485-BL can support 15 commands to read sensors. And combine the return to one or several uplink payloads.

Each RS485 commands include two parts:

- What commands RS485-BL will send to the RS485 sensors. There are total 15 commands from AT+COMMAD1, ATCOMMAND2,..., to AT+COMMANDF. All commands are of same grammar.
- 2) How to get wanted value the from RS485 sensors returns from by 1). There are total 15 AT Commands to handle the return, commands are AT+DATACUT1,AT+DATACUT2,..., AT+DATACUTF corresponding to the commands from 1). All commands are of same grammar.
- 3) Some RS485 device might has longer delay on reply, so user can use AT+CMDDL to set the timeout for getting reply after the RS485 command is sent. For example AT+CMDDL1=1000 to send the open time to 1000ms

After we got the valid value from each RS485 commands, we need to combine them together with the command **AT+DATAUP**.

Below are examples for the how above AT Commands works.

**AT+COMMANDx**: This command will be sent to RS485 devices during each sampling, Max command length is 14 bytes. The grammar is:

For example, if we have a RS485 sensor. The command to get sensor value is: <u>01 03 0B B8 00 02</u> <u>46 0A</u>. Where 01 03 0B B8 00 02 is the Modbus command to read the register 0B B8 where stored the sensor value. The 46 0A is the CRC-16/MODBUS which calculate manually.

In the RS485-BL, we should use this command AT+COMMAND1=01 03 0B B8 00 02,1 for the same.

**AT+DATACUTx**: This command defines how to handle the return from AT+COMMANDx, max return length is 45 bytes.

#### Examples:

#### Grab bytes:

```
AT+PAYVER=1
AT+COMMAND1=01 03 0b b8 00 02 ,1
AT+COMMAND2=0,0
AT+DATACUT2=0,0,0

### 3.3.4 Compose the uplink payload

Through AT+COMMANDx and AT+DATACUTx we got valid value from each RS485 commands, Assume these valid value are RETURN1, RETURN2, .., to RETURNx. The next step is how to compose the LoRa Uplink Payload by these RETURNs. The command is **AT+DATAUP**.

# **Examples: AT+DATAUP=0**

Compose the uplink payload with value returns in sequence and send with A SIGNLE UPLINK. Final Payload is

Battery Info+PAYVER + VALID Value from RETURN1 + Valid Value

# from RETURN2 + ... + RETURNx

Where PAYVER is defined by AT+PAYVER, below is an example screen shot.

```

DATA1=RETURN1 Valid Value = 20 20 0a 33 90 41
```

DATA2=1<sup>st</sup>  $\sim$  6<sup>th</sup> byte of Valid value of RETURN10=  $\frac{02 \text{ aa } 05 \text{ 81 } 0a \text{ 20}}{100 \text{ ac}}$ 

DATA3=7<sup>th</sup> ~ 11<sup>th</sup> bytes of Valid value of RETURN10 = 20 20 20 2d 30

Below are the uplink payloads:

Notice: the Max bytes is according to the max support bytes in different Frequency Bands for lowest SF. As below:

- \* For AU915/AS923 bands, if UplinkDwell time=0, max 51 bytes for each uplink (so 51 -5 = 46 max valid date)
- \* For AU915/AS923 bands, if UplinkDwell time=1, max 11 bytes for each uplink (so 11 -5 = 6 max valid date).
- \* For US915 band, max 11 bytes for each uplink (so 11-5 = 6 max valid date).
- \* For all other bands: max 51 bytes for each uplink (so 51 -5 = 46 max valid date).

### 3.3.5 Uplink on demand

Except uplink periodically, RS485-BL is able to uplink on demand. The server sends downlink command to RS485-BL and RS485 will uplink data base on the command.

Downlink control command:

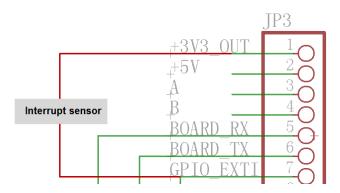

0x08 command: Poll an uplink with current command set in RS485-BL.

<u>0xA8 command</u>: Send a command to RS485-BL and uplink the output from sensors.

## 3.3.6 Uplink on Interrupt

Put the interrupt sensor between 3.3v\_out and GPIO ext.

AT+INTMOD=0 Disable Interrupt

AT+INTMOD=1 Interrupt trigger by rising or falling edge.

AT+INTMOD=2 Interrupt trigger by falling edge. ( Default Value)

AT+INTMOD=3 Interrupt trigger by rising edge.

# 3.4 Uplink Payload

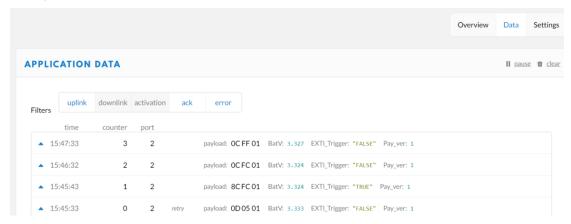

Size(bytes)	2	1	Length depends on the return from the commands
Value	Battery(mV)	PAYLOAD_VER	If the valid payload is too long and exceed the maximum
	&		support payload length in server, server will show payload not
	Interrupt _Flag		provided in the LoRaWAN server.

Below is the decoder for the first 3 bytes. The rest bytes are dynamic depends on different RS485 sensors.

```
function Decoder(bytes, port) {
//Payload Formats of RS485-BL Deceive
return {
      //Battery,units:V
      BatV:((bytes[0]<<8 | bytes[1])&0x7fff)/1000,
      //GPIO_EXTI
      EXTI_Trigger:(bytes[0] & 0x80)? "TRUE":"FALSE",
      //payload of version
      Pay_ver:bytes[2],
      };
}</pre>
```

TTN uplink screen shot.

# 3.5 Configure RS485-BL via AT or Downlink

User can configure RS485-BL via AT Commands or LoRaWAN Downlink Commands There are two kinds of Commands:

- ✓ Common Commands: They should be available for each sensor, such as: change uplink interval, reset device. For firmware v1.3, user can find what common commands it supports: http://wiki.dragino.com/index.php?title=End\_Device\_AT\_Commands\_and\_Downlink\_Comm ands
- ✓ **Sensor Related Commands**: These commands are special designed for RS485-BL. User can see these commands below:

### 3.5.1 Common Commands:

They should be available for each of Dragino Sensors, such as: change uplink interval, reset device. For firmware v1.3, user can find what common commands it supports: <a href="http://wiki.dragino.com/index.php?title=End">http://wiki.dragino.com/index.php?title=End</a> Device AT Commands and Downlink Commands

#### 3.5.2 Sensor related commands:

### **RS485 Debug Command**

This command is used to configure the RS485 devices; they won't be used during sampling.

> AT Command

m: 0: no CRC, 1: add CRC-16/MODBUS in the end of this command

Downlink Payload

Format: A8 MM NN XX XX XX XY YY

#### Where:

- ♦ MM: 1: add CRC-16/MODBUS; 0: no CRC
- NN: The length of RS485 command
- XX XX XX XX: RS485 command total NN bytes
- YY: How many bytes will be uplink from the return of this RS485 command, if YY=0, RS485-BL will execute the downlink command without uplink; if YY>0, RS485-BL will uplink total YY bytes from the output of this RS485 command

#### For example,

To connect a Modbus Alarm with below commands.

- ✓ The command to active alarm is: <u>0A 05 00 04 00 01</u> <u>4C B0.</u> Where 0A 05 00 04 00 01 is the Modbus command to read the register 00 40 where stored the DI status. The 4C B0 is the CRC-16/MODBUS which calculate manually.
- ✓ The command to deactivate alarm is: <u>0A 05 00 04 00 00</u> <u>8D 70.</u> Where 0A 05 00 04 00 00 is the Modbus command to read the register 00 40 where stored the DI status. The 8D 70 is the CRC-16/MODBUS which calculate manually.

So if user want to use downlink command to control to RS485 Alarm, he can use:

```
A8 01 06 0A 05 00 04 00 01 00: to activate the RS485 Alarm
A8 01 06 0A 05 00 04 00 00 00: to deactivate the RS485 Alarm
```

A8 is type code and 01 means add CRC-16/MODBUS at the end, the 3<sup>rd</sup> byte is 06, means the next 6 bytes are the command to be sent to the RS485 network, the final byte 00 means this command don't need to acquire output.

### **Set Payload version**

This is the first byte of the uplink payload. RS485-BL can connect to different sensors. User can set the PAYVER field to tell server how to decode the current payload.

> AT Command:

```
AT+PAYVER: Set PAYVER field = 1
```

Downlink Payload:

```
OxAE 01 → Set PAYVER field = Ox01
OxAE 0F → Set PAYVER field = Ox0F
```

### **Set RS485 Sampling Commands**

#### AT+COMMANDx or AT+DATACUTx

These two commands are use to configure how the RS485-BL polling data from Modbus device. Detail of usage please see : polling RS485 device.

## > AT Command:

AT+COMMANDx: Configure RS485 read command to sensor.

AT+DATACUTx: Configure how to handle return from RS485 devices.

### Downlink Payload:

0xAF downlink command can be used to set AT+COMMANDx or AT+DATACUTx.

Note: if user use AT+COMMANDx to add a new command, he also need to send AT+DATACUTx downlink.

Format: AF MM NN LL XX XX XX XX YY

#### Where:

- ♦ MM: the ATCOMMAND or AT+DATACUT to be set. Value from 01 ~ 0F,
- NN: 0: no CRC; 1: add CRC-16/MODBUS; 2: set the AT+DATACUT value.
- ♦ LL: The length of AT+COMMAND or AT+DATACUT command
- ♦ XX XX XX XX: AT+COMMAND or AT+DATACUT command
- ♦ YY: If YY=0, RS485-BL will execute the downlink command without uplink; if YY=1, RS485-BL will execute an uplink after got this command.

### Example:

AF 03 01 06 0A 05 00 04 00 01 00	: Same as AT+COMMAND3=0A 05 00 04 00 01,1
AF 03 02 06 <mark>10 01 05 06 09 0A</mark> 00	: Same as AT+DATACUT3=16,1,5+6+9+10
AF 03 02 06 <mark>0B 02 05 07 08 0A</mark> 00	: Same as AT+DATACUT3= <b>11,2,5~7+8~10</b>

#### Fast command to handle MODBUS device

AT+MBFUN is valid since v1.3 firmware version. The command is for fast configure to read Modbus devices. It is only valid for the devices which follow the MODBUS-RTU protocol. This command is valid since v1.3 firmware version

AT+MBFUN can auto read the Modbus function code: 01, 02, 03 or 04. AT+MBFUN has lower priority vs AT+DATACUT command. If AT+DATACUT command is configured, AT+MBFUN will be ignore.

#### Example:

- ➤ AT+MBFUN=1 and AT+DATACUT1/AT+DATACUT2 are not configure (0,0,0). So RS485-BL.
- AT+COMMAND1= 01 03 00 10 00 08,1 --> read slave address 01, function code 03, start address 00 01, quantity of registers 00 08.
- AT+COMMAND2= 01 02 00 40 00 10,1 --> read slave address 01, function code 02, start address 00 40, quantity of inputs 00 10.

```
1, AT+COMMAND1=01 03 00 10 00 08
1, AT+COMMAND2=01 02 00 40 00 10
                                       AT+DATACUT1=0,0,0
AT+DATACUT2=0,0,0
                                                               AT+CMDDL1=0
                                                               AT+CMDDL2=0
AT+COMMAND3=0.0
                                              AT+CMDDL3=0
AT+CMDDL4=0
                       AT+DATACUT3=0,0,0
AT+COMMAND4=0,0
                       AT+DATACUT4=0,0,0
                       AT+DATACUT5=0,0,0
AT+DATACUT6=0,0,0
AT+COMMAND5=0,0
                                               AT+CMDDL5=0
AT+COMMAND6=0,0
                                               AT+CMDDL6=0
AT+COMMAND7=0,0
                       AT+DATACUT7=0,0,0
                                               AT+CMDDL7=0
AT+COMMAND8=0.0
                       AT+DATACUT8=0,0,0
                                               AT+CMDDL8=0
AT+COMMAND9=0,0
                       AT+DATACUT9=0,0,0
                                               AT+CMDDL9=0
AT+COMMANDA=0,0
                       AT+DATACUTA=0,0,0
                                               AT+CMDDLA=0
AT+COMMANDB=0.0
                                               AT+CMDDI B=0
                       AT+DATACUTB=0.0.0
AT+COMMANDC=0,0
                       AT+DATACUTC=0,0,0
                                               AT+CMDDLC=0
AT+COMMANDD=0,0
                       AT+DATACUTD=0,0,0
AT+DATACUTE=0,0,0
                                              AT+CMDDLD=0
AT+CMDDLE=0
AT+COMMANDE=0,0
AT+COMMANDF=0,0
                       AT+DATACUTF=0,0,0
                                               AT+CMDDLF=0
Start Tx events
OK
         = 01 03 00 1<u>0 00 08 45 c9</u>
                                                                                DATA1:8 register values
RETURN1 = 01 03 10 01 00 05 ff 00 00 00 00 01 03 00 00 00 00 00 86 fe
CMD2 = 01 02 00 40 00 10 78 12 → DATA2:16 register values

RETURN2 = 01 02 02 20 00 a0 78

Payload = 0C FC 01 01 00 05 ff 00 00 00 00 10 3 00 00 00 00 00 00 20 00 ...
                                                                                      → DATA:DATA1+DATA2
[177893]***** UpLinkCounter= 4 *****
[177895]TX on freq 867700000 Hz at DR 3
[178145]RX on freq 869525000 Hz at DR 3
[178148]txDone
[179143]RX on freq 867700000 Hz at DR 3
[179183]RX on freq 869525000 Hz at DR 3
[179185]rxTimeOut
```

#### **RS485** command timeout

Some Modbus device has slow action to send replies. This command is used to configure the RS485-BL to use longer time to wait for their action.

Default value: 0, range: 0 ~ 5 seconds

AT Command:

AT+CMDDLaa=hex(bb cc)

Example:

AT+CMDDL1=1000 to send the open time to 1000ms

Downlink Payload:

Ox AA aa bb cc

Same as: AT+CMDDLaa=hex(bb cc)

Example:

0xAA | 01 | 03 E8  $\rightarrow$  Same as **AT+CMDDL1=1000 ms** 

## Uplink payload mode

Define to use one uplink or multiple uplinks for the sampling.

The use of this command please see: Compose Uplink payload

> AT Command:

AT+DATAUP=0

AT+DATAUP=1

#### Downlink Payload:

0xAD 00 → Same as AT+DATAUP=0 0xAD 01 → Same as AT+DATAUP=1

## Manually trigger an Uplink

Ask device to send an uplink immediately.

Downlink Payload:0x08 FF, RS485-BL will immediately send an uplink.

### **Clear RS485 Command**

The AT+COMMANDx and AT+DATACUTx settings are stored in special location, user can use below command to clear them.

### > AT Command:

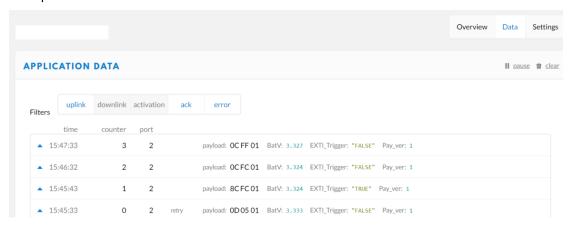

**AT+CMDEAR=mm,nn** mm: start position of erase ,nn: stop position of erase

Etc. AT+CMDEAR=1,10 means erase AT+COMMAND1/AT+DATACUT1 to

AT+COMMAND10/AT+DATACUT10

Example screen shot after clear all RS485 commands.

### The uplink screen shot is:

### Downlink Payload:

0x09 aa bb same as AT+CMDEAR=aa,bb

## **Set Serial Communication Parameters**

Set the Rs485 serial communication parameters:

> AT Command:

Set Baud Rate:

AT+BAUDR=9600 // Options: (1200,2400,4800,14400,19200,115200)

RS485-BL waterproof, battery power, RS485 LoRaWAN Converter User Manual

Set UART parity

AT+PARITY=0 // Option: 0: no parity, 1: odd parity, 2: even parity

Set STOPBIT

AT+STOPBIT=0 // Option: 0 for 1bit; 1 for 1.5 bit; 2 for 2 bits

## > Downlink Payload:

A7 01 aa bb: Same AT+BAUDR=hex(aa bb)\*100

Example:

♦ A7 01 <u>00 60</u> same as AT+BAUDR=9600
 ♦ A7 01 <u>04 80</u> same as AT+BAUDR=115200

A7 <u>02</u> aa: Same as AT+PARITY=aa (aa value: 00 , 01 or 02)
A7 <u>03</u> aa: Same as AT+STOPBIT=aa (aa value: 00 , 01 or 02)

### 3.6 Buttons

Button	Feature
RST	Reboot RS485-BL

#### **3.7 LEDs**

LEDs	Feature
LED1	Blink when device transmit a packet.

## 3.8 Switch Jumper

Switch Jumper	Feature	
SW1	ISP position: Upgrade firmware via UART	
	Flash position: Configure device, check running status.	
SW2	5V position: set to compatible with 5v I/O.	
	3.3v position: set to compatible with 3.3v I/O.,	

<sup>+3.3</sup>V: is always ON

<sup>+5</sup>V: Only open before every sampling. The time is by default, it is AT+5VT=0. Max open time. 5000 ms.

# 4. Case Study

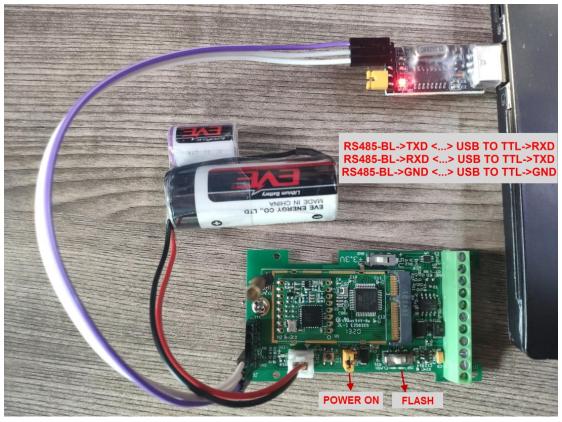

User can check this URL for some case studies.

http://wiki.dragino.com/index.php?title=APP RS485 COMMUNICATE WITH SENSORS

## 5. Use AT Command

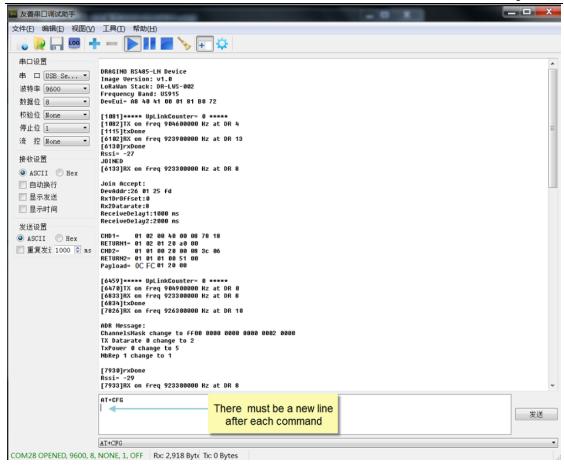

### **5.1 Access AT Command**

RS485-BL supports AT Command set. User can use a USB to TTL adapter plus the 3.5mm Program Cable to connect to RS485-BL to use AT command, as below.

In PC, User needs to set **serial tool**(such as <u>putty</u>, SecureCRT) baud rate to **9600** to access to access serial console of RS485-BL. The default password is **123456**. Below is the output for reference:

More detail AT Command manual can be found at AT Command Manual

## **5.2 Common AT Command Sequence**

## 5.2.1 Multi-channel ABP mode (Use with SX1301/LG308)

If device has not joined network yet:

AT+FDR

AT+NJM=0

ATZ

If device already joined network:

AT+NJM=0

ATZ

## 5.2.2 Single-channel ABP mode (Use with LG01/LG02)

AT+FDR Reset Parameters to Factory Default, Keys Reserve

AT+NJM=0 Set to ABP mode

AT+ADR=0 Set the Adaptive Data Rate Off

AT+DR=5 Set Data Rate

AT+TDC=60000 Set transmit interval to 60 seconds

AT+CHS=868400000 Set transmit frequency to 868.4Mhz

AT+RX2FQ=868400000 Set RX2Frequency to 868.4Mhz (according to the result from server)

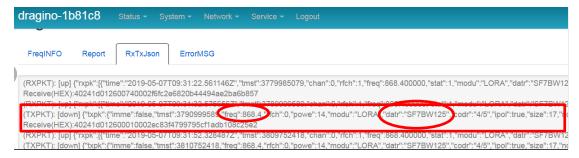

AT+RX2DR=5 Set RX2DR to match the downlink DR from server. see below

AT+DADDR=26 01 1A F1 Set Device Address to 26 01 1A F1, this ID can be found in the LoRa Server portal.

ATZ Reset MCU

#### Note:

- 1. Make sure the device is set to ABP mode in the IoT Server.
- 2. Make sure the LG01/02 gateway RX frequency is exactly the same as AT+CHS setting.
- 3. Make sure SF / bandwidth setting in LG01/LG02 match the settings of AT+DR. refer this link to see what DR means.
- 4. The command AT+RX2FQ and AT+RX2DR is to let downlink work. to set the correct parameters, user can check the actually downlink parameters to be used. As below. Which shows the RX2FQ should use 868400000 and RX2DR should be 5

### 6. FAQ

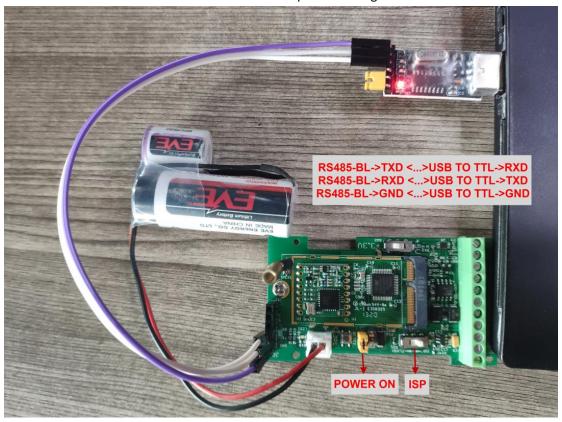

### 6.1 How to upgrade the image?

The RS485-BL LoRaWAN Controller is shipped with a 3.5mm cable, the cable is used to upload image to RS485-BL to:

- ✓ Support new features
- ✓ For bug fix
- ✓ Change LoRaWAN bands.

Below shows the hardware connection for how to upload an image to RS485-BL:

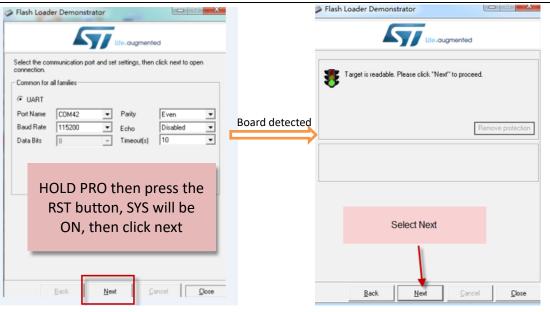

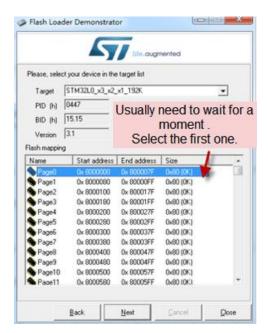

Step1: Download flash loader.

**Step2**: Download the LT Image files.

**Step3:** Open flashloader; choose the correct COM port to update.

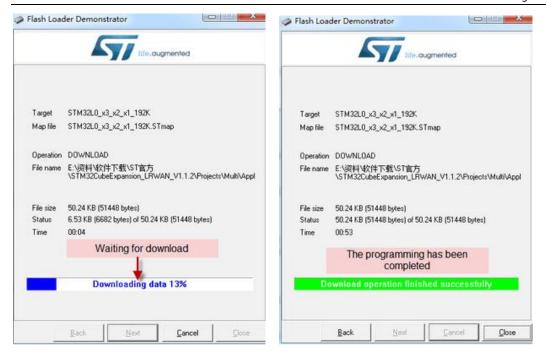

# 6.2 How to change the LoRa Frequency Bands/Region?

User can follow the introduction for <u>how to upgrade image</u>. When download the images, choose the required image file for download.

# 6.3 How many RS485-Slave can RS485-BL connects?

The RS485-BL can support max 32 RS485 devices. Each uplink command of RS485-BL can support max 16 different RS485 command. So RS485-BL can support max 16 RS485 devices pre-program in the device for uplink. For other devices no pre-program, user can use the <u>downlink message</u> (type code 0xA8) to poll their info.

### 7. Trouble Shooting

# 7.1 Downlink doesn't work, how to solve it?

Please see this link for debug:

http://wiki.dragino.com/index.php?title=Main\_Page#LoRaWAN\_Communication\_Debug

## 7.2 Why I can't join TTN in US915 /AU915 bands?

It might about the channels mapping. Please see for detail.

http://wiki.dragino.com/index.php?title=LoRaWAN Communication Debug#Notice of US915.2 FCN470.2FAU915 Frequency band

#### 8. Order Info

Part Number: RS485-BL-XXX

#### XXX:

**EU433**: frequency bands EU433

**EU868**: frequency bands EU868

KR920: frequency bands KR920

CN470: frequency bands CN470

> AS923: frequency bands AS923

AU915: frequency bands AU915

**US915**: frequency bands US915

➤ IN865: frequency bands IN865

RU864: frequency bands RU864

KZ865: frequency bands KZ865

## 9. Packing Info

## Package Includes:

- ✓ RS485-BL x 1
- ✓ Stick Antenna for LoRa RF part x 1
- ✓ Program cable x 1

# **Dimension and weight:**

✓ Device Size: 13.5 x 7 x 3 cm

✓ Device Weight: 105g

✓ Package Size / pcs : 14.5 x 8 x 5 cm

✓ Weight / pcs : 170g

## 10. Support

- Support is provided Monday to Friday, from 09:00 to 18:00 GMT+8. Due to different timezones we cannot offer live support. However, your questions will be answered as soon as possible in the before-mentioned schedule.
- Provide as much information as possible regarding your enquiry (product models, accurately describe your problem and steps to replicate it etc) and send a mail to

support@dragino.com
